مديحة محمد الطيب خروبي

1- Ask the user to write 2 numbers and print even numbers only from sum of these 2 numbers to the Multiplying of them .

```
var x= prompt("enter the first number")
var y =prompt("enter the second number")
z=x+y;
h=x*y
```

```
function check(x,y){
  if (z%2 == 0){
    console.log(x+y)
  }
  else if(h%2==0){
    console.log(x*y)
  }
}
check()
```

2- using switch case method (ask the user to enter his profession case frontend = print "salary is 7500" , case backend = print "salary is 9000" case full-stack = "salary is 11000" .

```
var x=prompt("enter your enter profession")
switch (x){
  case "frontend":
    console.log("salary is 7500");
    break;
  case "backend":
    console.log("salary is 9000")
    break;
  case "full stack":
    console.log("salary is 11000")
    break;
  default:
    console.log("try again")
}
```

3- result = [{ name : "Fatma" , city : "Mansoura" } ; { name : "Mariam" , city : "Paris" } , { name : "Ahmed" , city : "cairo" }] Correct the error in the previous example and print in console Fatma , Mansoura with 2 different ways .

```
var result= [ { name : "Fatma" , city : "Mansoura" } , { name : "Mariam" , city : "Paris" } , { name : "Ahmed" , city : "cairo" } ]
console.log(result[0].name, result[0].city)
console.log(result[0])
```

4- Ask the user to put his salary in last 10 months and print the average .

.....

5- Ask the student to give you his degree in 6 Subjects and print Percentage and (Overall rating using if condition) . (>= 85 print excellent , >=75 - v.good ,etc)

.....
