**Task One**

Sociology is the study of social behavior, society, and human interactions. It explores various social phenomena, such as inequality, social institutions, and cultural norms.

One example of a phenomenon that can be investigated in sociology is the gender wage gap, which examines the unequal pay between men and women in the workforce.

Another example is the study of social stratification, which investigates how social hierarchies are created, maintained, and reinforced within societies.

Lastly, the phenomenon of deviance and crime can be studied in sociology, which explores the social and cultural factors that contribute to criminal behavior and how societies respond to it.
